
Mykola Lukyniuk

Automation & Software Solutions Developer

Ivano-Frankivsk, Ukraine

Engineering student building practical software for connected workflows: Python desktop applications, Telegram systems, API integrations and interactive technical visualization.

SELECTED PROJECTS

STEELON

Currency monitoring application with API updates, historical values in SQLite, a desktop interface and Telegram notifications.

Python / APIs / SQLite / Desktop / Telegram

Student Activity System

Telegram workflow for student tasks and participant submissions, with persistent SQLite records and activity statistics.

Python / Telegram Bot API / SQLite / Automation

3D Automation Models

Interactive technical models that make automation components and system relationships easier to explore.

3D / Engineering / Interactive visualization

SKILLS & TOOLS

Software: Python, desktop applications, web interfaces, Git.

Connected systems: APIs, Telegram Bot API, automation workflows.

Data: SQLite, PostgreSQL.

Engineering: automation systems, 3D models, technical visualization.

EDUCATION & ACTIVITY

Automation and Computer-Integrated Technologies

IFNTUOG - student

Student self-government

Organizational and project work, collaboration and coordination of student activities.

Personal software projects

Ongoing practical work with automation tools, connected applications and engineering visualization.
